~~Rev. 2~~ - bell ringer

$$\begin{array}{r} 1) \quad -3x + 4y = 12 \\ \quad \quad 3x - 6y = 18 \\ \hline \end{array}$$

Sections 6-3 and 6-4

Learning target:

You can solve systems of equations by elimination.

$$\begin{array}{r} 1) \quad -3x + 4y = 12 \\ \quad \quad 3x - 6y = 18 \\ \hline \end{array}$$

$$2) \quad 4x + 2y = 28$$

$$4x - 3y = 18$$

---

$$3) \quad 2x + y = 23$$

$$3x + 2y = 37$$

---

$$4) \quad 4x + 3y = 8$$

$$3x - 5y = -23$$

---

$$5) \quad \frac{1}{4}x + 4y = \frac{11}{4}$$

$$3x + \frac{1}{2}y = \frac{37}{4}$$

---
