

## Quiz on Friday

Acid Rain - Ph 1.5 to 5.5

Caused by: Burning Fossil Fuels

Coal, oil, Gas

- Releases sulfur and Nitrogen in the air. Combines with oxygen.

- Acid Rain can damage plants, animals, building

We can prevent by limiting the use of fossil fuels.

Fertilizer - Overfeeds plants which cause waterways to become clogged. Squeeze out other life.

Manure - carries bacteria

We can restrict/limit the amount of fertilizer used.

Road Salt - melts and covers trees and new plants. Burns them. Runs into lakes and streams. Harms all life.

We can use other chemicals to melt the ~~salt~~ snow ☺
